#### **Credit Agencies Reform Act**

- In 2006, Congress passed the Credit Rating Agency Reform Act
  - o This law requires SEC to establish clear guidelines for determining which credit agencies qualify as Nationally Recognized Statistical Rating Organizations (NRSRO's)
  - This law gave SEC the power to regulate NRSRO's internal process reporting and record keeping and how to guard against conflicts of interest
  - This law specifically makes NRSO determination subject to Congressional vote
  - o This law prohibits the SEC from regulating on NRSO rating methodology
- Dobb-Frank Wall Street Reform and Consumer Protection Act July 2010
  - This law adds number of requirements on NRSRO's that were immediately effective (do not depend on SEC rulemaking)
  - Primary Goal of this law is to hold agencies accountable for quality of rating transparency
  - Also required SEC to adopt a number of new rules concerning
    - Annual reports on internal control
    - Conflicts of interest with respect to sales and marketing practices
    - "Look-Backs" when credit analysts leave the NRSO
    - Fines and Penalties
    - Disclosure of data and assumptions underlying credit rating
    - Disclosure about 3<sup>rd</sup> part due diligence
    - Analyst training and testing
    - Consistent application of rating symbols and definitions

## **Factors Considered in Assigning a Rating**

# **Overview of Rating Criteria**

#### **Quantitative Metrics**

The rating agencies evaluate a number of qualitative metrics, including:

- Management ability and reporting structures
- Governance
- Government relations
- Risk management
  - Exposure to risky sectors such as health care
- Risks in the debt portfolio
- Strategic planning, benchmarking, stress testing

#### Qualitative Metrics

The rating agencies evaluate many factors, including strategic assessment and evaluation of governance and management, in assigning ratings

- Total size / revenues of an institution
- Revenue growth
- Student demand as measured by selectivity, matriculation, and retention
- Operating results as measured by margin and cash flow margin
- Diversity of revenue mix

Moody's and S&P each have new rating methodologies for the higher education sector that incorporates the use of a scorecard matrix

• Additionally, Moody's and S&P evaluate historical trends, expected future performance and peer analysis

Fitch does not publish a scorecard, though uses similar quantitative, qualitative, trend analysis, and peer review metrics

## **Moody's Rating Methodology Update**

# **Higher Education Rating Methodology Changes**

#### **Select Highlights**

- Moody's new Global Higher Education Rating Methodology started on November 23, 2015
- Moody's has consolidated its U.S. and non-U.S. higher education methodologies into one single rating approach adjustments made to certain ratio calculations to enable global comparability and trend analysis
- A major component of the changes is moving away from a net asset-based measure to a cash-based wealth metric:
  - Considers permanently restricted assets to account for the spendable component
  - Accounts for pension, OPEB, and swap liabilities, as well as deferred revenues, which would otherwise depress net assets
- The new "Spendable Cash" definition and metric is now in Moody's reports and calculated historically for each rated institution
- Moody's data for new metrics and ratios is shown in Moody's Municipal Financial Ratio Analysis (MFRA) back to 2004; however, Moody's has only reviewed data for accuracy back to 2009
- Qualitative factors will continue to enable adjustments
- According to Moody's, approximately 95% of ratings will remain unchanged

#### **Modifications to the Scorecard**

- Included with the methodology changes are updates to the Moody's Higher Education Scorecard, which result in a single scorecard for public and private universities
- Additions:
  - Reputation and Pricing Power (measured as the % Annual Change in Operating Revenues)
  - Strategic Positioning (measured somewhat qualitatively)
- Deletions:
  - Student Demand data: Primary Selectivity,
     Primary Matriculation, Net Tuition per Student,
     Average Gifts per Student, and Average Debt
     Service Coverage
  - Monthly Liquidity to Demand Debt
- Revisions:
  - Expendable Financial Resources to Direct Debt
     → Financial Leverage (Spendable Cash & Investments to Total Debt)
  - Debt to Operating Revenues → Debt
     Affordability (Total Debt to Cash Flow)

## **Moody's New Higher Education Scorecard**

Moody's global higher education methodology provides a new scorecard which differs from the previous version

- Market Profile factor focuses on operating revenues and "strategic positioning" sub-factor included as a qualitative factors
  - Eliminates specific admission and tuition factors
- Operating Performance factor largely unchanged
  - o Eliminates coverage ratio
- Wealth and Liquidity factor focuses more broadly on the institution's ability to cover expenses
- Leverage factor encompasses and institution's ability to afford debt
  - New factor which was always a major influence in the Moody's final rating outcome but previously not memorialized in the scorecard
  - Eliminates the focus on variable rate and puttable debt

Moody's Global Higher Education Scorecard	Sub-Factor Weights
Factor 1: Market Profile (30%)	
Scope of Operations:	
Operating Revenue (\$000)	15%
Reputation and Pricing Power:	1070
Annual Change in Operating Revenue (%)	5%
Strategic Positioning	10%
Factor 2: Operating Performance (25%)	1070
Operating Results:	
Operating Cash Flow Margin (%)	10%
Revenue Diversity:	
Max Single Contribution (%)	15%
Factor 3: Operating Wealth and Liquidity (25%)	
Total Wealth:	
Total Cash and Investments (\$000)	10%
Operating Reserve:	
Spendable Cash & Investments to Operating Expenses (x)	10%
Liquidity:	
Monthly Days Cash on Hand (x)	5%
Factor 4: Leverage (20%)	
Financial Leverage:	
Spendable Cash & Investments to Total Debt (x)	10%
Debt Affordability:	1070
Total Debt to Cash Flow (x)	10%

The sub-factor ranges by rating category are based on the distribution of values from Moody's current rated portfolio.

#### **Numeric Values**

Aaa	Aa	Α	Ваа	Ва	В	Саа	Са
1	3	6	9	12	15	18	20

#### **NEGATIVE**

What could change outlook to negative?

 A move to below 3% annual growth, our current sector-adjusted inflationary measure

#### **STABLE**

- Aggregate operating revenue, a key indicator for our outlook, will grow at or above 3% over the next 12-18 months
  - All revenue streams expected to grow modestly
    - Ongoing expense discipline will contribute to steady operating performance
    - Reserves will remain stable, with continued strategic investment

#### **POSITIVE**

What could change outlook to positive?

Projected Annual revenue growth above 5%

# Public Universities

- Over 230
- \$15B of outstanding debt
- Median rating of Aa2 by number of institutions

# Private Colleges

- Over 270
- \$85B of outstanding debt
- Median rating of A2 by # of institutions
- Aa2 weighted by rated debt

# Community Colleges

- More than 65
- \$3B of outstanding debt
- Median Rating of A2 by # of institutions, A1 by weighted by rated debt

#### Non-US Universities

 20 in UK, Australia, Canada, Mexico and Singapore

- In addition, Moody's rates:
  - Around 90 not-or-profit institutions, \$13 billion of rated debt, median rating of A1 by # of institutions and Aa3 weighted by rated debt
  - o Approximately **35 independent K-12 schools**, \$1 billion of debt, median rating of A1 by # of institutions and Aa3 weighted by rated debt

Source: Moody's US Higher Education and Not-for Profits Update January 2016

# Moody's Expects Revenue Streams will grow, over next 12-18 months

Revenue Stream	Expected Growth Fiscal Year 2016-2017
Student Charges	2-3%
State Funding	2-4%
Patient Care	4-6%
Research	2-4%
Endowment Income	4-5%
Gifts	3-4%

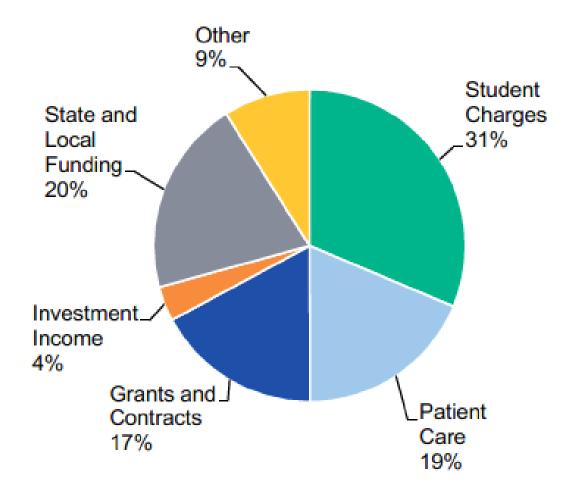

Source: Moody's Investors Service

# **Aggregate Operating Revenue Will Grow at or Above 3%**

Sector-Wide Revenues are Diversified

#### Public Universities Derived an Aggregate 20% of Funding from their states

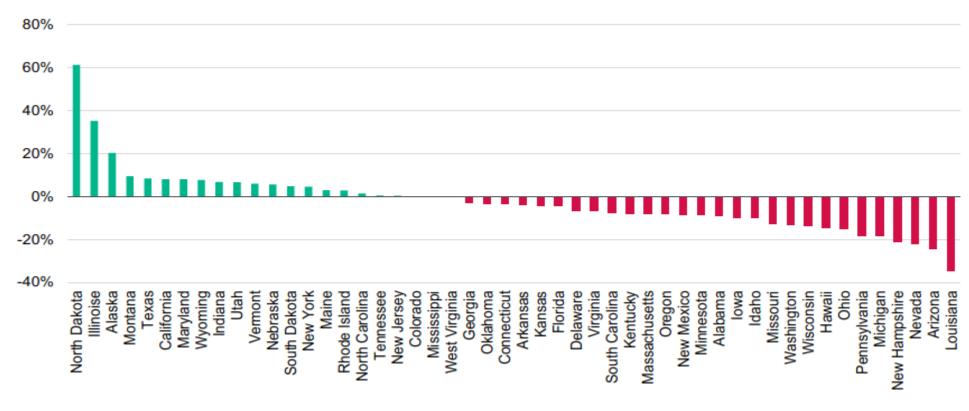

Source: Moody's Investor Service; Moody's Investors Service estimate

### Wide Disparity in Funding Levels from State to State

#### % Increase in State Funding, 2009-2015

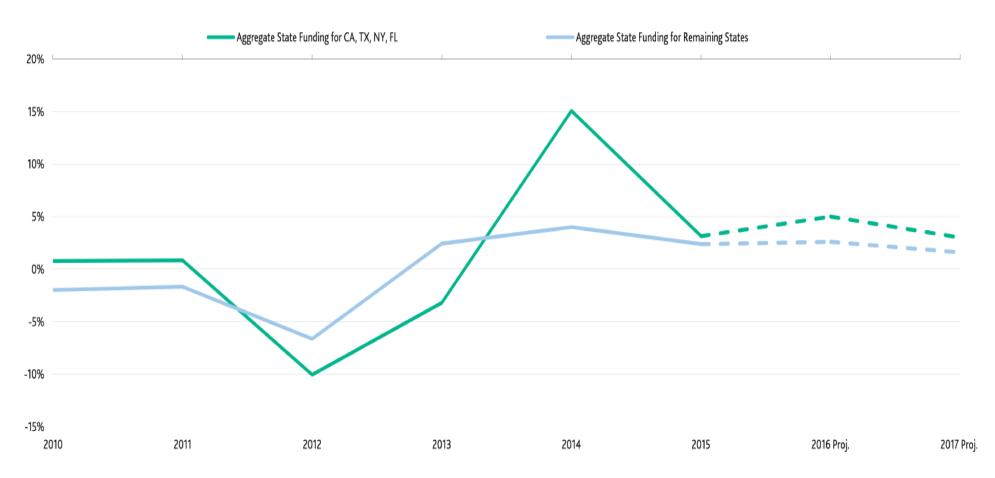

Source: Illinois State University-Grapevine Data

### **Aggregate State Funding**

• Large States with Economic Diversity Will Drive Aggregate State funding Growth

Data Based on historical aggregate state funding for Moody's rated public universities

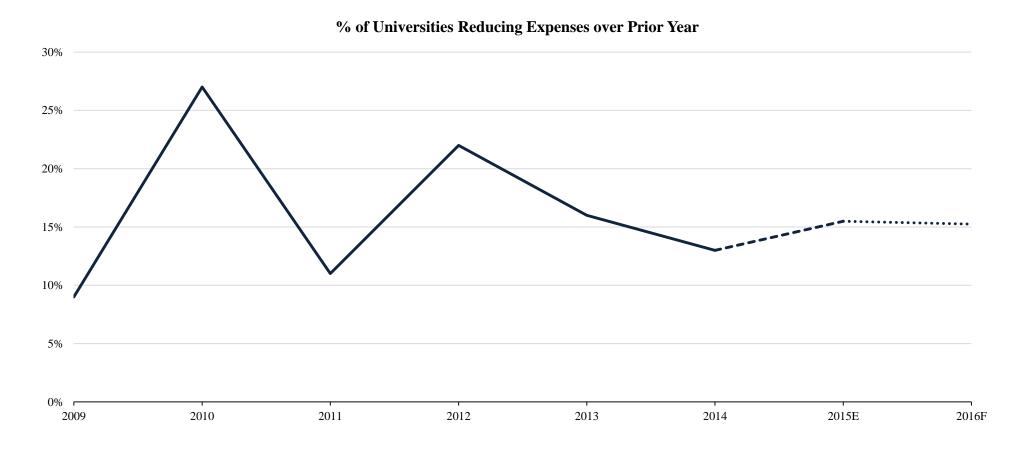

Funding Volatility from fiscal 2012-2014 on green line is partially a result of actions from the Florida Legislature to temporarily tap university reserves to help balance the state budget Source: Moody's investors Service; Grapevine data from Illinois State University's center for the Study of Education Policy in cooperation with the State Higher Education Executive Officers

# **Moody's Expects Ongoing Expense Discipline Contributes to Stability**

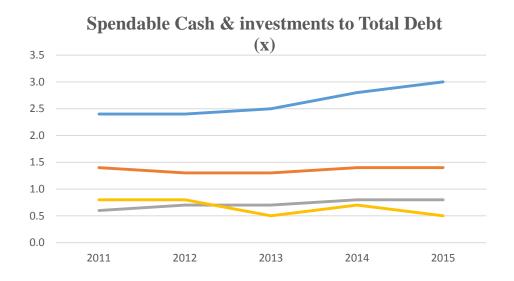

• Between 15-20% of Universities will need to cut costs to maintain operating stability

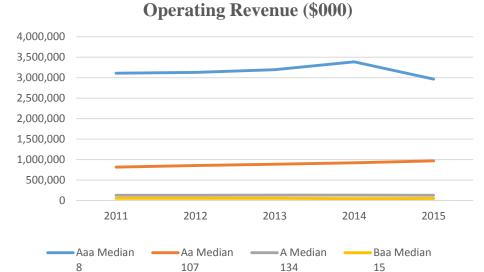

Source: Moody's Investors Service; Moody's Investors Service estimate

#### **Max Contribution (%)**

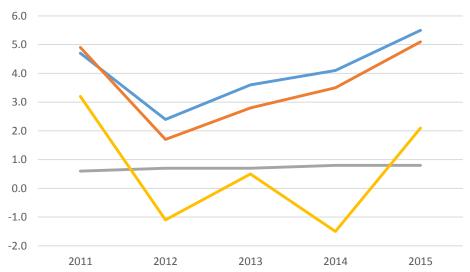

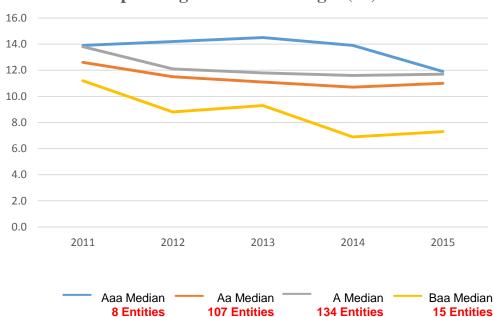

# **Moody's Key Ratios by Rating Category**

#### **Annual Change in Operating Revenue (%)**

#### **Operating Cash Flow Margin (%)**

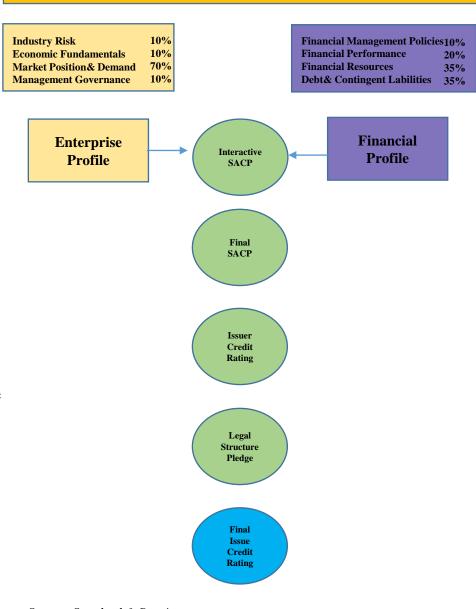

## **S&P Higher Education Rating Methodology Changes**

#### **Select Highlights**

- On January 6, 2016, S&P's revised criteria became effective
  - o All credits must be reviewed by January 6, 2017
- S&P aims to improve transparency as to approach, to enhance the forward-looking nature of ratings, and to enable better comparison across other sectors and asset classes
- A major element of new methodology is the quantitative framework for scoring the Enterprise and Financial Profiles
- S&P determines an indicative Stand-alone Credit Profile (SACP), as shown in the diagram to the right
  - Based on a complex structure of pre-determined qualitative factors and caps, peer adjustments, and other relevant scoring criteria (e.g. government support), the SACP would be modified to determine Issuer Credit Rating
- S&P initially predicted 85% of ratings would have no impact, 10% of ratings could be raised, and 5% of ratings could be lowered
- Combination of revised criteria and changes to credit fundamentals could impact those credits with non-stable outlooks (~ 17%)

Overall Framework for Assessing a Universities SACP, ICR, and Issue Credit Rating

University of Alaska	Aa3	AA-	NR

### **Strategies to Address Rating Concerns**

- Verify ratios computed by rating agencies
  - Need to understand the definition of the components of the ratio, some adjustments may be necessary
- Factors that can impact ratios on a comparative basis
  - Amortization Rapid amortization and bullet maturities. If college amortizes debt rapidly, then annual debt service will be higher than debt that amortizes over 30 or 40 years. Bullet maturities impact Maximum Annual Debt Service calculation. Impacts two ratios: 1) Debt Service to Expenses and 2) Operating Margin
  - Depreciation If college uses method other than "straight line over useful life", it should be noted.
- Notify rating agencies as soon as possible when changes/events occur:
  - Enrollment declines
  - Significant variances to budget
  - Approval or changes to plans Strategic Plan, Capital improvement Plan, Fundraising Campaign
  - o Key administrator resignations
  - o Impact of natural disaster
- Best Practices
  - Keep a list of rating agency contacts so they can be notified when changes occur
  - Maintain debt, swap and investment policies
  - o Invite rating analysts for site visits

### **How Do Ratings Effect Interest Rates?**

- Ratings impact the pricing of a college or university's bonds
- For tax-exempt bonds, the rating impacts the spread to the "AAA" MMD Yield Curve
- Spread to MMD reflects the extra yield that is required to sell the issuers bonds when compared to a "AAA" general obligation MMD scale
- For taxable bonds, the rating impacts the spread to Treasury Bonds
- Spread to the Treasury Bonds reflects the additional increase to the various coupons that is required to sell the issuers bonds

Consideration	Issuer	Muni vs. corporate buyer
Call Feature:	Par Calls Available	Make-whole call most common
Amortization:	Small Maturity Sizes ok	Large blocks/bullets most common; Potential pricing benefit of "benchmark". Size > \$250MM; Pay liquidity premium for smaller sizes
Use of Proceeds:	Private Business Use	Private Business Use

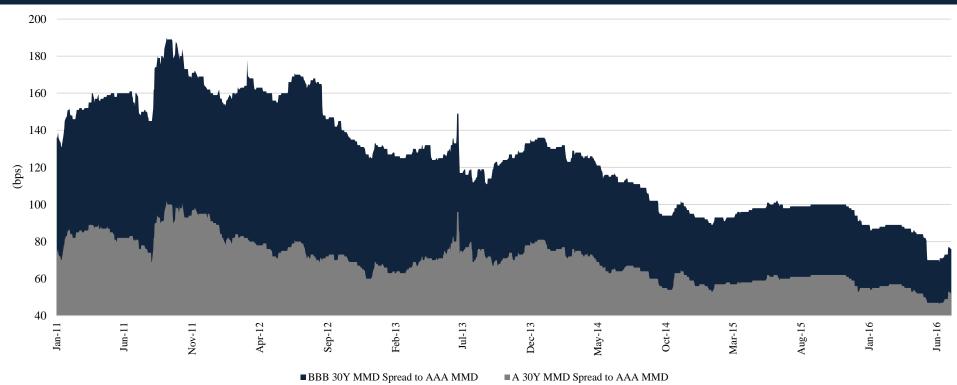

# Tax-exempt and taxable benchmarks have rallied to historical lows... 30Y UST (Taxable Benchmark), 30Y AAA MMD (Tax-exempt Benchmark)

- The high grade benchmark index (AAA MMD) for tax-exempt bonds is at an all-time low for the 30Y part of the yield curve
- In the past year, 30Y AAA MMD rallied 109 bps, currently at a 2.27%; since January 2009 rallied 278 bps
- The 30Y UST is also near historic lows, now 2.45% and +20 bps from the all-time low
- The 30-year closed on December 31, 2015 at 3.01%. Pre-Brexit, on 6/23, it closed at 2.55%. During the last ten years, the 30-year Treasury averaged 3.76%. In the previous ten year period, it averaged 5.51%. Now 2.15%
- The 10-year closed on December 31, 2015 at 2.27%. Pre-Brexit, on 6/23 it closed at 1.75%. During the last ten years, the 10-year Treasury averaged 2.95%. In the previous ten year period, it averaged 5.10%. Now 1.39%

# Credit spreads are at their tightest for "A" and "BBB" Issuers 30Y "A" and "BBB "MMD vs. AAA MMD

- Rates are made up of the following components: benchmark rate + credit spread = borrowing rate
- Benchmark rates fell, but credit spreads also narrowed to historically tight levels as investors "move down the credit curve" to pick up yield
- Single-A and triple-B institutions are seeing record low yields
- Any bond rating will impact future borrowing costs, but not the performance of the existing debt portfolio

# Credit Factors Unique to Texas Public Institutions

- Debt Service related to Tuition Revenue Bonds is included in operating expense
- Reimbursement for TRB debt service is not always included in the rating agencies operating revenue calculations
- Reimbursement for TRB debt service in some cases is reflected in Non-operating revenues, either legislative revenue (included in adjusted operating revenue) or other
- Reimbursement for TRB debt service in some cases is reflected in Other Revenues and Transfer as transfers from other state agencies this is NOT included in operating revenues
- Track carefully FY17 HB100 TRB debt service reimbursement vs. outstanding TRB debt service
- HEAF appropriations is not normally included in rating agencies adjustments to operating revenues
- Provide detail of use of HEAF appropriations used for operating expenses and debt service can be added back into operating revenues
- The increase in appropriations for both HEAF and TRB debt service can have a material impact on operating revenues
- Special Appropriations also need to be identified for rating agencies
- All Texas Public higher education institutions have the same pledge on their RFS Bonds
- Pledged Revenues under the universities Bond Resolution includes all the funds and BALANCES available from the operations of the university, excludes HEAF and TRB appropriations
- AFR Schedule 2D Analysis of Funds Available for Debt Service only includes revenues, not related fund balances
- Securities laws require accuracy of the completeness of financial information related to the municipal security
